Now West German
professional lenses priced the
incredible Calumet way.

The Calumet Caltar® II Lenses Story

When you make the world's most popular view camera, you learn a lot about view camera optics. We took what we learned to one of West Germany's most respected optics manufacturer. There, the strict design specifications of Calumet were teamed with tradition-rich West German precision craftsmanship to create the new Calumet Caltar® II lenses.

The new Caltar® II incorporates six element formulas of the highest quality rare earth glass lenses mounted in precision Copal shutters. The result is a superb collection of view camera lenses which offer the professional the creative excellence you've been searching for, without the typical technical limitations.

For example, the Caltar® II allows you the full use of tilts, swings, rises and shifts on the latest view cameras, no matter how extreme. Yet, they deliver excellent color rendition, needle-sharp definition and brilliant contrast.

The new Caltar® II also incorporates a greatly reduced field curvature. So, aberration is almost insignificant, and you can stop down from full aperture to the smallest stop with practically no focus shift.

Caltar® II also delivers outstanding corner-to-corner sharpness and a significantly improved illumination at the edges of the field. You'll also be delighted at how Caltar® II faithfully captures colors, even the most delicate. The result is a wonderfully balanced color rendition and superb contrast even at the widest aperture.

Never before has Calumet experience been teamed with the finest German optical craftsmanship to produce a superior series of view camera lenses. And Calumet's direct-from-the-factory prices make them an outstanding value.

Make your selection from the complete technical information which follows, and use the handy attached order form to experience the new breakthrough in professional photographic lenses.

Caltar® II Multicoated Lenses

Multicoating Improves Light Transmission, Increases Contrast Fidelity and Avoids "Ghost Images"

Available in eight focal lengths for every photographic need.
